ATTENTION DEPOT OPERATORS AND STAFF:

**RE: PLASTIC ONE-WAY KEG OVER 1 LITRE SORT**

**Please review the proper handling techniques for the Plastic One-way Keg Over 1 Litre (CRIS Code 4023). Depots are required to depressurize these containers before shipping to ABCRC.**

ABCRC has recently been receiving containers in the Plastic One-way Keg Over 1 Litre sort that have not been depressurized. This is a safety concern when handling and processing these containers at ABCRC.

It is important to notify your staff of proper handling techniques for these containers (examples on Page 2). These containers must be depressurized with the unique tool provided by the manufacturer prior to shipping. If you require the tools to depressurize these containers, please contact the ABDA.

Depots not following the above requirements will receive a warning letter for first offence and compliance levies will be issued for future non-compliance.

Thank you for considering the safety of our industry partners. Should you have any questions please contact the Beverage Container Management Board at 1-888-424-7671.
